Texas A&M University     Dept. of Forest Science

Course title     Advanced Remote Sensing  
Course number     FRSC 661  
Course date     Fall Semester 2004  
Location     Lecture: HFSB 101; Lab: Centeq B 214  
Meeting day(s)     Tuesday (HFSB 101) and Thursday (Centeq)  
Meeting time(s)     Lectures: Tuesday and Thursday 12:45 to 1:35  
                     Lab: Thursday 1:45 to 3:45 (SSL)  

Instructor Information

Name     Sorin Popescu  
Email     s-popescu@tamu.edu  
Office location     Centeq B 221D  
Phone     862-2614  
WebCT page     https://webct.tamu.edu/ (follow link to Course Listings or use MyWebCT Logon)  
Office hours     Monday, 2:00pm-3:00pm. In addition - open door policy, when the door is open, though I recommend emailing or calling for appointments. Please put “661” in the subject of email messages regarding this class to receive prompt attention. Please avoid “drop-ins” just before class on Tuesday and Thursday.  

Teaching Assistant     TBA  

Course description  

Objectives     The goal of this course is twofold: to introduce students with a basic knowledge of remote sensing to advanced topics in digital remote sensing applications and to instill enthusiasm in this subject area to encourage future specialists. The course emphasizes a hands-on learning environment, with in depth insights into theoretical and conceptual underpinnings in both aerial and satellite remote sensing. Primary focus will be placed on advanced active and passive sensors characteristics, digital image analysis, and processing for a broad range of sensors and applications. Ultimately, the course will empower students to delve more deeply into advanced issues in remote sensing and to customize and develop image processing tools for their particular area of interest.

Lab assignments and homework (due at the beginning of the following lab period)

Project proposal and presentations: October 21st

Project progress report: November 4th

Project paper due: November 25th

Project presentations: December 2nd

Final exam: December 15, Wednesday, 8-10 a.m.

Prerequisites

Approval of instructor or one of the following: FRSC 608, RENR 444, GEOG 651, GEOG 661.

Important dates

Midterm exam: October 14th, Thursday, during lecture/lab time

Project proposal and presentations: October 21st

Project progress report: November 4th

Project paper due: November 25th

Project presentations: December 2nd

Final exam: December 15, Wednesday, 8-10 a.m.

Note: no lab on Thursday, Nov. 18: classes will be dismissed at 1:30pm for Bonfire Memorial Dedication (2:30pm)
Tentative course and laboratory outline

Laboratory, Homework, and Exam policy

The University policy on Scholastic Dishonesty will be enforced in this course. While you are encouraged to help each other understand concepts and techniques, all work submitted should be your own. Exceptions to this policy will be explicitly noted by the instructor and should not be assumed by students. Make-up exams will not be offered. If you are going to miss an exam for a valid reason (per University rules), contact the instructor well in advance.

All laboratory and homework assignments are to be completed in a neat, logical, and clear fashion. A 10% reduction in grade, up to a maximum of 50%, will be assessed for each weekday an assignment is handed in late. Assignments will not be accepted if more than 5 weekdays late, unless documented excuse is presented (family or medical emergencies).
Laboratory reports

Unless otherwise indicated, all laboratory exercises must contain a brief report following the format guidelines given below. The report should be divided into Introduction, Methods, Results and Discussion, and Conclusions sections, and should tie together and synthesize the lecture, readings, and practical exercises. Each laboratory exercise will be due the following laboratory period, at the beginning of class, unless otherwise indicated. Instructor may give extra credit to students that

Projects

Each student is required to design and implement a class project. The project must use digital image source data and the student must develop a specific output product useful in his own field of interest for applying remote sensing. The project is designed to (1) build upon and synthesize techniques or concepts demonstrated in class, and (2) let you explore your own data sets and research objectives using your developing remote sensing "toolkit." Work that contributes to your thesis research or current employment is encouraged. Students may write their own image processing software, using IDL, as an integral part of the project; however, a specific (useful) output product must be one result of the project. Group projects tackling larger research or management issues are encouraged. All projects require instructor approval.

A proposal (150-word maximum) and outline describing the project and proposed methods must be turned in by the date indicate in the Important dates section. However, students are encouraged to turn in proposals as soon as is feasible. The proposal/outline should contain at least five preliminary references. The final report must be no more than twenty pages in length including figures and references, and the final report and summary/outline must follow the format guidelines for papers and laboratory reports. Failure to follow these guidelines will result in the paper not being accepted. The final report must include an abstract of no more than 150 words that is succinct and informative without reference to the text. This should be followed by the Introduction (including a thorough literature review, with Background and Objectives), Methods, Results, and Discussion/Conclusions.

Keep in mind that these are semester projects. Laboratory time will be provided for work on your project during the semester, but will be insufficient by itself. A 2-5 page project progress report is required at the start of class as indicated in the Important dates section. Well-chosen student projects may be suitable for subsequent publication in either conference proceedings or the peer-reviewed literature. Please keep this goal in mind as you develop and carry out your projects, and particularly as you prepare your final reports.
Format Guidelines for Papers and Laboratory Reports

Papers and lab reports must be double-spaced (using a 12-point proportionally-spaced font) with 1 inch margins all around. Captions, references, footnotes, appendices, tables, etc. may be single-spaced. Figures and tables are encouraged when they serve to illustrate or clarify a point. They should be inserted in the text. Each page following the first full page of text should have a page number in the upper right corner or bottom center. A title page may be supplied; however, reports in special binders of any kind will generally not be accepted. In text citations and references should follow the guidelines for manuscripts submitted for publication to the American Society of Photogrammetry and Remote Sensing (http://www.asprs.org/publications.html), for Photogrammetric Engineering and Remote Sensing (PE&RS).

Lab reports should be printed on one side of 8.5 by 11 inch white paper. Final projects must be printed using the same criteria. Students are required to keep photocopies and/or electronic copies of all work submitted.

Aggie Code of Honor

Aggies do not lie, cheat, or steal, nor do they tolerate those who do.

The Aggie Code of Honor functions as a symbol to all Aggies, promoting understanding and loyalty to truth and confidence in each other.

Americans with Disabilities Act

The Americans with Disabilities Act (ADA) is a federal anti-discrimination statute that provides comprehensive civil rights protection for persons with disabilities. Among other things, this legislation requires that all students with disabilities be guaranteed a learning environment that provides for reasonable accommodation of their disabilities. If you believe you have a disability requiring an accommodation, please contact the Office of Support Services for Students with Disabilities in Room 126 of the Student Services Building. The phone number is 845-1637.
